Subject: Reference Letter

To Whom It May Concern

As part of our LEED consultancy services for the Valentino flagship retail store in Madrid located at Calle de José Ortega y Gasset 16, we have contracted Mimta EcoYapı located in Istanbul to provide us with a full energy model in compliance with ASHRAE 90.1-2010 Appendix G for LEED ID+C v4 certification. Mimta EcoYapı has been exceptionally good at creating the proposed and baseline models of the retail store and including all energy efficient features of the design so as to guarantee the maximum number of points from the relevant criteria. They have completed the models and the necessary documentation for the preliminary review within the promised timeframe, and they have also done all necessary revisions in the models as a result of the review comments from the certification body, including revisions arising as a result of other MEP credit review comments. The energy model was approved in the second round of review without losing any points from the original submission.

We would recommend Mimta EcoYapı for building energy modeling services for LEED certification without hesitation as they are fully competent, dedicated and are very easy to communicate

Yours sincerely,

Patrizia Laplana Bigott
